VF Venieri eyes electric future
Among the Italian company's current new models are the 1.33C mini backhoe loader, with its compact dimensions helping to expand lateral visibility, and the 8.63TL wheeled loader with telescopic arm, whose hydraulic system is said to follow Venieri's philosophy of robustness, dynamism and controllability.
The company's comprehensive machine range also includes the novel multi-functional articulated backhoe loader, the VF8.23G and VF10.23E, powered by Bosch-Rexroth hydrostatic transmission and a Deutz engine Tier 4F ready for the US market.
Based in Lugo, Emilia-Romagna, Venieri plans to keep growing in its small/middle-size equipment offering, supplying heavy-duty products powered by the best available components offered by the premium market. The company says its product range also offers customers high productivity, high flexibility and strong performance, along with very competitive TCO (total cost of ownership).
